**MARICOPA COUNTY
OFFICE OF THE MEDICAL EXAMINER
701 W. Jefferson Street
Phoenix, AZ 85007**

MEDICAL EXAMINER REPORT

DECEDENT: Shawn Taylor Gagne

CASE: 23-06943

DATE OF EXAMINATION: 07/08/2023

TIME: 0808 Hours

PERSONS PRESENT AT EXAMINATION:

Mesa Police Department: Detective Jay Ingram, #13539

CAUSE OF DEATH:

Gunshot wounds

MANNER OF DEATH:

Homicide

HOW INJURY OCCURRED:

Shot by law enforcement officer(s)

September 18, 2023

Date Signed

A blue ink signature of Derek Bumgarner, written in a cursive style.

**DEREK BUMGARNER, MD
MEDICAL EXAMINER**

SHAWN TAYLOR GAGNE

23-06943

FINDINGS

- I. Gunshot wounds (please see Evidence of Injury section for details)
 - A. Head
 1. Atypical gunshot wound of the left frontoparietal scalp
 2. Perforating gunshot wound of the right face
 - B. Trunk
 1. Penetrating gunshot wound of the left chest extending to the midline back
 2. Penetrating gunshot wound of left chest extending to the right back
 - C. Upper extremities
 1. Penetrating gunshot wound of the left shoulder extending to the right back
 - D. Lower extremities
 1. Perforating gunshot wound of the left thigh
- II. Additional recovered projectile fragments of the neck and trunk (please see Evidence of Injury section for details)
- III. Blunt force injuries (please see Evidence of Injury section for details)
 - A. Head
 1. Abrasions, lacerations, and contusions/ecchymoses of the scalp and face
 - B. Trunk
 1. Contusions, abrasion, and laceration of the chest, abdomen, and back
 - C. Upper extremities
 1. Abrasions and contusions of the upper extremities
 - D. Lower extremities
 1. Abrasions and contusions of the lower extremities
- IV. Puncture wound of the posterior right leg (please see Evidence of Injury section for details)
- V. Toxicological analysis of the postmortem femoral blood and vitreous humor is resulted as positive for ethanol, caffeine, and cotinine (please see also separate Toxicology Report)
- VI. Class 1 obesity (Body Mass Index- 34.0 kg/m²)
- VII. Evidence of medical intervention

SUMMARY AND OPINION

The decedent is a 28-year-old male who was pronounced deceased on July 6, 2023. According to the investigative report, the decedent was reportedly shot by law

SHAWN TAYLOR GAGNE

23-06943

enforcement officers at his residence. Emergency medical services were called, and death was pronounced at the scene. Pertinent postmortem examination findings are summarized above and described below. Toxicological analysis of the postmortem femoral blood and vitreous humor is resulted as positive for ethanol, caffeine, and cotinine (nicotine metabolite).

Based on the autopsy findings and all other investigative information received to date and as available to me, it is my opinion that the decedent, a 28-year-old male, died of gunshot wounds.

It is further my opinion that the manner of death is homicide.

As with all death investigations, opinions expressed herein are amenable to change should new, reliable, and pertinent information come to light.

The Maricopa County Medical Examiner's Office is required by statute (A.R.S. § 11-594(A) (2) and (4)) to certify the cause and manner of death following completion of the death investigation of each case over which it assumes jurisdiction, and to promptly execute a death certificate, on a form provided by the state registrar of vital statistics, indicating the cause and manner of death. The form provided by the state registrar of vital statistics includes five manners of death: homicide, suicide, accident, natural, and undetermined. The determination of manner of death is a forensic determination by the pathologist predicated upon the totality of all then-known forensic evidence and other circumstances surrounding the cause of death; it is not a legal determination of criminal or civil responsibility of any person(s) for the death.

POSTMORTEM EXAMINATION

CLOTHING AND PERSONAL EFFECTS:

The body is received clad in, and accompanied by, those articles and items (if any) as outlined in the separate Property Inventory List and separate Evidence Release Form.

EVIDENCE OF MEDICAL INTERVENTION:

A laryngeal mask airway is in the mouth. Adhesive defibrillator pads and electrocardiogram leads are on the chest, abdomen, and right upper extremity. An adhesive pulse oximeter probe is on the right great toe. An intraosseous line is in the anterior left leg. An adhesive occlusive wound dressing is present on the upper left chest.

EVIDENCE OF POSTMORTEM TISSUE PROCUREMENT:

None.

EVIDENCE OF POSTMORTEM DECOMPOSITION:

None.

SHAWN TAYLOR GAGNE

23-06943

EXTERNAL EXAMINATION:

The unembalmed body is received in a plastic body bag secured by a blue-colored seal bearing the number 0014695. When first viewed, the hands are covered by white paper bags that are secured at the wrists. Gray metallic handcuffs are secured around the wrists and removed at the time of the postmortem examination revealing corresponding underlying ahemorrhagic ligature markings. A gray metallic conducted energy device ("Taser") barb attached to metallic wire and a gray metallic cylinder is embedded in the fabric of the decedent's pants. Postmortem radiographs are obtained. A red-colored identification band inscribed with the decedent's name and medical examiner case number is on the right ankle.

The body is that of a clinically obese adult male, which appears consistent with the recorded age of 28 years. The body is 70 inches in length and weighs 237 pounds (Body Mass Index- 34.0 kg/m²). The body is cool to palpation, subsequent to refrigeration. Rigor mortis is present. Postmortem lividity is primarily posterior and fixed.

The scalp hair is brown in color. Facial hair consists of a brown beard. The irides appear blue in color. There are no periorbital petechiae. No petechiae of the bulbar or palpebral surfaces of the conjunctivae are identified. The sclerae are off-white and the corneas are mildly cloudy. The nasal septum and facial skeleton are intact to palpation. The ears, nose, and lips are normally formed. The mouth contains natural dentition which is in fair condition. The oral mucosa and frenula are intact and unremarkable. The head shows evidence of injury as described below. The neck is without palpable masses or unusual mobility. The neck shows evidence of injury as described below. The chest and breasts are symmetric. Gynecomastia is absent. The abdomen is obese and soft. The trunk shows evidence of injury as described below. The extremities are normally developed, symmetric, and without edema. The fingernails are intact and grossly unremarkable. The extremities show evidence of injury as described below. The penis is circumcised, and the scrotal sac appears normally formed. The external genitalia, perineum, and anus are unremarkable.

IDENTIFYING MARKS:**Tattoos:**

A tattoo is present on the posterior left forearm. A tattoo is present on the posterior left fourth finger.

Scars:

No significant scars are identified.

SHAWN TAYLOR GAGNE

23-06943

EVIDENCE OF INJURY:**I. Gunshot wounds****A. Head and neck**

1. Atypical gunshot wound of the left frontoparietal scalp
 - a. Entrance/exit: An approximately 9/16 x 1/2 inch ovoid laceration is on the left frontoparietal scalp. Radiating peripheral lacerations measuring up to approximately 1/4 inch in greatest dimension extend from the approximately 7 o'clock, 9 o'clock, and 11 o'clock positions of the wound border. No soot deposition or gunpowder stippling is identified on the epidermal surface. The wound is centered at a position approximately 1-3/4 inches below the top of the head and 2 inches left of the anterior midline. Reflection of the scalp reveals a complex fracture of the left frontoparietal external calvarial table. There is black/brown discoloration of the bone of the external table. Shallow, slightly depressed fracture of the left, inferior border of the left frontoparietal calvarial external table transitions to comminuted fracture with external beveling of the left frontoparietal external calvarial table along the inferior and right borders of the defect. Examination of the corresponding position of the left frontoparietal internal calvarial table reveals radiating linear fractures without grossly apparent penetration into the intracranial space. This wound is labeled as "F" in the Maricopa County Office of the Medical Examiner (MCOME) photographs.
 - b. Wound path: The projectile or a projectile fragment tangentially perforates the skin and subcutaneous tissue of the left frontoparietal scalp and the external table of the left frontoparietal calvarium.
 - c. Associated injuries: Laceration and hemorrhage of the skin and soft tissues of the left frontoparietal scalp, fractures of the left frontoparietal calvarium, and focal subarachnoid hemorrhage of the left frontoparietal cerebrum.
 - d. Trajectory: Likely left-to-right and upward.
2. Perforating gunshot wound of the right face
 - a. Entrance: An approximately 5/16 x 1/4 inch ovoid, slightly irregular laceration is on the right face near the right nasolabial fold. Peripheral radiating lacerations measuring up to approximately 1/16 inch in greatest dimension extend from the superior border of the wound. An eccentric rim of red

SHAWN TAYLOR GAGNE

23-06943

abrasion measuring up to 1/16 inch in width is most prominent from the approximately 3 o'clock to 6 o'clock positions of the wound. Rare, faint, red, minute, punctate abrasions are present at the left border of the wound. No soot deposition is identified. The wound is centered at a position approximately 7 inches below the top of the head and 1 inch right of the anterior midline. This wound is labeled as "G" in the MCOME photographs.

- b. Exit: An approximately 3/16 x 1/8 inch irregular laceration is on the lateral right face at a position centered approximately 7-1/2 inches below the top of the head and 5-1/4 inches right of the anterior midline. No projectile or projectile fragments are recovered. This wound is labeled as "H" in the MCOME photographs.
- c. Wound path: The projectile or projectile fragment perforates the skin and soft tissues of the right face.
- d. Associated injuries: Laceration and hemorrhage of the skin and soft tissues along the wound path.
- e. Trajectory: Front-to-back, left-to-right, and downward.

B. Trunk

- 1. Penetrating gunshot wound of the left chest extending to the midline back
 - a. Entrance: An ovoid laceration measuring approximately 5/16 x 1/4 inch is on the anterolateral left chest. A thin eccentric rim of pink abrasion measuring up to approximately 1/16 inch in width is most prominent from the approximately 12 o'clock to 4 o'clock positions of the wound. Red abrasions measuring up to 1/8 inch in greatest dimension extend from the approximately 3 o'clock border of the wound. An area of red purple abraded contusion measuring approximately 5/16 x 1/4 inch extends from the approximately 6 o'clock to 11 o'clock borders of the wound. No soot deposition is identified. The wound is centered at a position approximately 13 inches below the top of the head and 5-1/2 inches left of the anterior midline. This wound is labeled as "D" in the MCOME photographs.
 - b. Recovery of projectile: A severely deformed, gilding metal jacketed projectile with base measurement of approximately 1/4 x 1/4 inch is recovered from the subcutaneous tissue of the back at a position centered approximately 23 inches below

SHAWN TAYLOR GAGNE

23-06943

the top of the head and in the midline of the back. An focus of purple ecchymosis measuring approximately 4 x 2-1/4 inches overlies the recovery site. This projectile is designated as "Projectile #1."

- c. Wound path: The projectile penetrates the skin, subcutaneous tissue, and skeletal muscles of the anterolateral left chest, the anterolateral left chest plate, the superior lobe of the left lung, the pericardium, the left ventricle of the heart, the inferior lobe of the left lung, the body of the stomach, the left hemi-diaphragm, the left hepatic lobe, the soft tissues of the posteromedial 10th left intercostal space, and the skeletal muscles and subcutaneous tissues of the back.
 - d. Associated injuries: Laceration and hemorrhage of the skin and soft tissues along the wound path, fractures of the anterolateral 3rd, 4th, and 5th left ribs, left hemothorax (300 mL), and spillage of gastric contents into the peritoneal cavity.
 - e. Trajectory: Front-to-back, left-to-right, and downward.
2. Penetrating gunshot wound of left chest extending to the right back
- a. Entrance: An ovoid laceration measuring approximately 1/2 x 5/16 inch is on the anteromedial left chest. An eccentric dark red rim of abrasion measuring approximately 1/8 inch in width is most prominent from the approximately 3 o'clock to 6 o'clock positions of the wound. No soot deposition or gunpowder stippling is identified. The wound is centered at a position approximately 12-3/4 inches below the top of the head and 2-1/2 inches left of the anterior midline. This wound is labeled as "E" in the MCOME photographs.
 - b. Recovery of projectile: A moderately deformed, gilding metal jacketed projectile with base measurement of approximately 1/4 x 1/4 inch is recovered from the subcutaneous tissue of the lateral right back at a position centered approximately 23 inches below the top of the head and 9-1/2 inches right of the posterior midline. An area of purple ecchymosis measuring approximately 3 x 1-1/2 inches overlies the recovery site. This projectile is designated as "Projectile #3."
 - c. Wound path: The projectile penetrates the skin and subcutaneous tissues of the anteromedial left chest, the anteromedial 1st left rib and proximal left clavicle at the left sternoclavicular/left 1st sternochondral joints, the superior lobe of the left lung, the right pulmonary hilum, the right hemi-

SHAWN TAYLOR GAGNE

23-06943

diaphragm, the right hepatic lobe, the soft tissues of the posterolateral right 10th intercostal space, and the subcutaneous tissue of the lateral right back.

- d. Associated injuries: Laceration and hemorrhage of the skin and soft tissues along the wound path, fracture of the manubrium, fracture of the anteromedial 1st left rib, fracture of the proximal left clavicle, right middle and inferior lobe pulmonary contusions, left hemothorax (300 mL), and right hemothorax (500 mL).
- e. Trajectory: Front-to-back, left-to-right, and downward.

III. Upper extremities

- 1. Penetrating gunshot wound of the left shoulder extending to the right back
 - a. Entrance: An ovoid laceration measuring approximately 9/16 x 7/16 inch is on the left shoulder. There is an eccentric, thin, pink-red rim of abrasion measuring up to approximately 1/16 inch in width is most prominent from the approximately 11 o'clock to 1 o'clock positions of the wound. Multiple red abrasions measuring up to approximately 1/8 inch in greatest dimension are present on the epidermal surface surrounding the wound. No soot deposition is identified. The wound is centered at a position approximately 9 inches below the top of the head and 8-1/2 inches left of the anterior midline. This wound is labeled as "C" in the MCOME photographs.
 - b. Recovery of projectile: A severely deformed, gilding metal jacketed projectile with base measurement of 1/4 x 1/4 inch is recovered from the subcutaneous tissue and skeletal muscles of the lower right back at a position approximately 27 inches below the top of the head and 3-1/4 inches right of the posterior midline. This projectile is designated as "Projectile #3."
 - c. Wound path: The projectile penetrates the skin and soft tissues of the left shoulder, the left chest plate, the pericardium, the right and left atria and the left and right ventricles of the heart, the inferior lobe of the left lung, the right hemi-diaphragm, the right hepatic lobe, the right psoas muscle, and the muscles and subcutaneous tissue of the right back.
 - d. Associated injuries: Laceration and hemorrhage of the skin and soft tissues along the wound path, fractures of the lateral

SHAWN TAYLOR GAGNE

23-06943

left 3rd, 4th, and 5th ribs, and left hemothorax (300 mL).

e. Trajectory: Front-to-back, left-to-right, and downward.

D. Lower extremities

1. Perforating gunshot wound of the left thigh

a. Entrance: An approximately 1 1/16 x 3/8 inch ovoid laceration is on the proximal, lateral left thigh. An eccentric thin rim of red abrasion measuring up to 1/8 inch in width is most prominent from the approximately the 7 o'clock to 11 o'clock positions of the wound. No soot deposition or gunpowder stippling is identified. The wound is centered at a position approximately 33 inches below the top of the head and 11 inches left of the anterior midline. This wound is labeled as "B" in the MCOME photographs.

b. Exit: An irregular-to-ovoid laceration measuring approximately 1-1/8 x 1/2 inch is on the proximal, posterolateral left thigh/lateral left buttock. Peripheral radiating lacerations measuring up to approximately 1/8 inch are present. No projectile or projectile fragments are recovered. The wound is centered at a position approximately 34-1/2 inches below the top of the head and approximately 8 inches left of the posterior midline and is on the lateral left buttock. This wound is labeled as "A" in the MCOME photographs.

c. Wound path: The projectile perforates the skin and subcutaneous tissue of the lateral left thigh/left buttock.

d. Associated injuries: Laceration and hemorrhage of the skin and soft tissues along the wound path.

e. Trajectory: Front-to-back, left-to-right, and downward.

II. Additional recovered projectile fragments

A. Neck

1. An approximately 3/16 x 1/8 inch laceration is present on the posterior left neck centered at a position approximately 6 inches below the top of the head and 3 inches left of the posterior midline. An approximately 1/8 x 1/8 inch irregular gray metallic fragment is recovered from the subcutaneous tissue. This fragment is designated as "Projectile fragment from left neck." Associated injuries include laceration and minimal hemorrhage of the skin and superficial subcutaneous tissue.

SHAWN TAYLOR GAGNE

23-06943

B. Trunk

1. An approximately 5/16 x 3/16 inch irregular laceration is on the left buttock centered at a position approximately 35-1/2 inches below the top of the head and 2 inches left of the posterior midline. An irregular gray metallic projectile fragment is recovered from the subcutaneous tissue of the left buttock. The fragment measures approximately 1/4 x 1/8 x 1/16 inch and is designated as "projectile fragment from left buttocks." Associated injuries include laceration and minimal hemorrhage of the skin and superficial subcutaneous tissue.

III. Blunt force injuries

A. Head

1. Minute superficial lacerations along with red purple contusions/ecchymoses are present at the left periorbital face and left upper eyelid.
2. An approximately 1/16 x 1/16 inch red abrasion is present at the left frontotemporal scalp.
3. An approximately 1/16 x 1/16 inch red abrasion is at the right alar crease.

B. Trunk

1. An approximately 1/8 x 1/8 inch superficial ovoid laceration is on the upper left back.
2. Multiple red purple contusions are on the chest and abdomen and range from approximately 1/4 to 5 inches in greatest dimension.
3. An approximately 4 inch red-yellow oblique linear abrasion extends across the lower right abdomen.

C. Upper extremities

1. Multiple red to red-yellow abrasions measuring up to approximately 1/2 inch in greatest dimension are on the posterior right shoulder, right elbow, and anterior right forearm.
2. An approximately 1-1/2 x 1 inch faint red-purple contusion is on the anterior right forearm.
3. Multiple red abrasions are on the anterior left forearm and left elbow and measure from approximately 1/16 to 1-3/4 inches in greatest dimension.
4. Multiple red-purple contusions measuring from approximately 1/16 to 1/4 inch in greatest dimension are on the anterior medial left arm.
5. Multiple red-purple contusions are present on the right arm and measure up to approximately 1 inch in greatest dimension.
6. Multiple red-purple contusions are present on the dorsal left forearm and dorsal left hand and measure up to approximately 2-1/2 inches in greatest dimension.

SHAWN TAYLOR GAGNE

23-06943

D. Lower extremities

1. Multiple purple contusions are on the anterior left thigh and left knee and measure up to approximately 1-1/2 inches in greatest dimension.
2. Multiple yellow-red abrasions are on the left knee and measure up to approximately 1 inch in greatest dimension.
3. Multiple red abrasions and purple contusions are on the left leg and measure up to approximately 1-1/2 inches in greatest dimension.
4. An approximately 1/8 x 1/8 inch red abrasion is on the dorsal and left toe.
5. An approximately 1 x 1/2 inch area of red-yellow abrasion is on the medial left ankle.
6. An approximately 7 x 4 inch field of yellow-red abrasion is on the anterior right thigh.
7. Multiple red abrasions and red/purple contusions are on the anterior right leg and measure up to approximately 2 inches in greatest dimension.

IV. Puncture wound of the posterior right leg

- A. An approximately 1/16 x 1/16 inch puncture wound with surrounding faint rim of purple-red ecchymosis measuring approximately 1/2 inch in diameter is on the proximal posterolateral right leg. This wound may represent the impact point of a deployed conducted energy device ("Taser").

Injuries described above will not be repeated below. Projectile wounds are labeled as a matter of descriptive convenience and labels do not imply a specific wound order or degree of wound severity. Trajectories are provided with reference to the standard anatomic position.

INTERNAL EXAMINATION:

The body is opened by a standard Y-shaped thoracoabdominal incision. All viscera occupy their appropriate anatomic relationships. Serous surfaces are smooth and glistening throughout.

ORGAN WEIGHTS:

Brain:	1325 grams	Liver:	2600 grams
Heart:	400 grams	Spleen:	125 grams
Right lung:	325 grams	Right kidney:	125 grams
Left lung:	350 grams	Left kidney:	150 grams

SHAWN TAYLOR GAGNE

23-06943

BODY CAVITIES:

See Evidence of Injury. The thoracic and abdominal organs are in their normal anatomic positions. The body cavities contain no adhesions.

HEAD:

See Evidence of Injury. The leptomeninges are thin and delicate. The cranial nerves and blood vessels on the base of the brain are unremarkable. The cerebral and cerebellar hemispheres are symmetrical, and the gyri and sulci have no edema or atrophy. The gray-white matter junction is clearly demarcated throughout the cerebral hemispheres. The white matter has no cysts, hemorrhages, necrosis, or visible neoplasms. The basal ganglia, thalami, mammillary bodies, and hippocampi are grossly normal. Sections through the cerebral hemispheres, cerebellum, and brainstem are unremarkable. The ventricles are symmetric and normally formed. The upper portion of the cervical spinal cord, as viewed from the cranial cavity, is unremarkable. The bony and soft tissue connections between the head and neck are palpably stable.

NECK:

See Evidence of Injury. The neck organs are removed en bloc with the tongue. The tongue is unremarkable externally and upon sectioning. The soft tissue and strap muscles of the anterior neck are unremarkable. The lumen of the larynx is not obstructed. The epiglottis and laryngeal mucosa are smooth and unremarkable, without petechiae. The hyoid bone and laryngeal cartilages are intact. The thyroid gland is in the appropriate anatomic position and has no cysts or masses. The parathyroid glands are inconspicuous. The prevertebral fascia is unremarkable. The cervical spine is intact and appropriately aligned to palpation.

CARDIOVASCULAR SYSTEM:

See Evidence of Injury. On sectioning, the coronary arterial system shows no luminal stenosis. The coronary ostia are unremarkable. The cardiac valves are normally formed. Serial sectioning of the remaining myocardium reveals a firm, red-brown myocardium. Free wall thicknesses of the myocardium are: left ventricular free wall 1.3 cm, interventricular septum 1.1 cm, and right ventricular free wall 0.3 cm. The aorta and its major branches and the great veins are normally distributed and unremarkable. The great vessels contain no thromboemboli. The intimal surface of the abdominal aorta shows no significant atherosclerosis.

RESPIRATORY SYSTEM:

See Evidence of Injury. The remaining pleural surfaces are smooth and without focal lesion. The major bronchi are unremarkable and patent. The remaining hilar vessels are unremarkable; thromboemboli are absent. Sectioning of the lungs reveals a pink-red, mildly congested and edematous parenchyma.

SHAWN TAYLOR GAGNE

23-06943

HEPATOBIILIARY SYSTEM:

See Evidence of Injury. The remaining liver capsule is smooth and intact. The parenchyma is yellow-brown, soft, and mildly congested. The gallbladder has an unremarkable wall and mucosa. Calculi are absent. The portal tract structures are unremarkable.

ENDOCRINE SYSTEM:

The adrenal glands are normally situated and have no masses or hemorrhages. The golden yellow cortices are clearly demarcated from the gray-tan medullae. The pituitary gland is unremarkable.

LYMPHORETICULAR SYSTEM:

The splenic capsule is smooth, gray, and intact. The splenic parenchyma has no visible infarcts, neoplasms, or other lesions. Lymph nodes throughout the body are not enlarged.

GASTROINTESTINAL SYSTEM:

See Evidence of Injury. The esophageal mucosa is gray, smooth, and unremarkable. The gastroesophageal junction is clearly demarcated and has no ulcers, varices, or tears. The stomach contains scant tan fluid. There are no distinct tablets or capsules. The remaining gastric mucosa contains a normal rugal architecture, and there are no ulcers within the gastric or proximal duodenal mucosa. The small and large intestines are unremarkable externally. The appendix is present and grossly unremarkable. The pancreas is lobular and tan, is without frank hemorrhage or calcifications, and has no cysts or masses.

GENITOURINARY SYSTEM:

The renal capsules strip with ease to reveal smooth cortical surfaces. On sectioning, the parenchyma is yellow-brown and firm, and the thickness of the cortices is normal. The renal parenchyma has no cysts, infarcts, or visible neoplasms. There is good demarcation of the corticomedullary junctions. The papillae are intact, and the calyces, pelves, and ureters are unremarkable. The urinary bladder contains 140 mL of urine; the bladder mucosa is smooth and without focal lesion. The prostate gland is unremarkable. The testes are symmetrical and have no palpable cysts or masses.

MUSCULOSKELETAL SYSTEM:

See Evidence of Injury. The remaining bony framework, supporting musculature and soft tissues are unremarkable.

SHAWN TAYLOR GAGNE

23-06943

TOXICOLOGY:

Samples of postmortem vitreous humor, postmortem femoral blood, postmortem right pleural blood, and postmortem urine are collected and submitted for laboratory analysis (see also separate Toxicology Report).

EVIDENCE:

A DNA blood card and a fingerprint card are obtained at the time of postmortem examination. The following items are submitted as evidence to law enforcement personnel present at the time of the postmortem examination (see also separate Evidence Release Form):

1. Shorts
2. Underwear
3. Shirt
4. Left hand bag
5. Right hand bag
6. Handcuffs
7. Ring
8. Lighter
9. Paper
10. Projectile fragment from left buttock
11. Projectile #1
12. Additional DNA blood blot
13. Projectile #2
14. Conducted energy device ("Taser") barb, cylinder, wire
15. Projectile #3
16. Projectile fragment from left neck

SPECIMENS:

Samples of postmortem femoral blood and postmortem pleural blood are retained. Representative sections of select organs are retained in formalin.

MICROSCOPIC EXAMINATION:

Histopathological specimens are not submitted.

EXHIBIT 4

**Mesa Police Department****NARRATIVE TEXT HARDCOPY****(13A-3 AGGRAVATED ASSAULT)****Narrative Text****Type** Supplemental Narrative**Subject** NEGOTIATOR NARRATIVE**Author** P19441 - ORR, C. (19441)**Related Date** Jul-07-2023 3:16

On 07/06/2023 at approximately 2220 hours I was working on call as a Crisis Negotiator and had just returned to Metro from an unrelated call when I overheard on the radio a criminal barricade was in progress at 1233 N Mesa Dr. Apt 2164. Call comments stated a male had stated he would "blow RP's brains out" male was reported to be armed with long guns and handgun and had fired weapons into the air.

Negotiator Adair # 18901 was already responding to the scene, while I and Negotiator Ibarra #22438 began to travel to the scene from Metro. While enroute to the scene I overheard the male subject was observed at the front door of the apartment holding a rifle, and the male subject then closed the door.

Upon arrival I walked into the perimeter and located Negotiator Adair who was already on the phone with the male. I assumed the role of the Secondary Negotiator, and while preparing equipment to begin listening to the conversation between Adair and the male I heard a single gunshot fired, and a SWAT Sniper radio in that a shot had been fired.

I was able to connect my equipment with Adair and overhear the conversation between him and the male subject. The male was extremely agitated, yelling and saying he was going to shoot officers and that he "had a hole in him." While listening in I heard approximately three volleys of gunfire from the direction of the male's apartment. During the subsequent exchange of gunfire, I and Adair moved to a more advantageous position behind a Patrol vehicle and continued to try and negotiate with the male. Adair gave clear safe surrender instructions to the male, who did not respond. Sound from the male such as moving around, and labored breathing were heard from the open line. Adair maintained the open line with the male letting him know that medical personal was on scene and that they would treat him, but he needed to cooperate before medical could be brought to him.

The sounds coming from the male lasted for a few minutes, and these were relayed to command. Eventually the sounds coming from the male diminished and were not able to be heard. The open line was maintained until tactical moved up and the male was placed in custody at approximately 2317 hours.

This concluded my involvement in this case, should I have further involvement it will be documented in supplemental reports.

Related Date Jul-07-2023 17:12

On 07/06/23 at approximately 2215 hours, I was working as an officer on the Mesa Full Time SWAT team and was informed that there was a call occurring where a subject strangled his girlfriend and had fired shots off in his apartment with an AK-47. Myself and approximately five other SWAT officers were asked to start headed to 1233 N Mesa Dr. in Mesa AZ reference this call in case patrol needed more bodies.

While in route to the call, patrol did their best to get the subject out of the building, however, every attempt was futile. Some attempts made where: Verbal over the PA system of a tahoe and bean bagging the front door in attempt to get the subject to wake up or comply with commands being given him.

As I arrived on scene, I heard over the radio that movement was seen in the upstairs window. Officers stated that the subject walked past the south windows and was making his way to the front. However, when officers observed the subject open the front door, it was observed that he was holding a semi-automatic rifle. He was given surrender instructions but did not comply. Instead of complying, the subject slammed the front door.

As I approached the subject's apartment, I went to the south side and supported patrol there. While assisting patrol, the subject came to the south facing windows numerous times but only held the rifle to his side.

Once there were enough SWAT officers on scene, I was tasked with going to support Officer Freeman on a sniper hide deployment. As I approached the unit where Officer Freeman was, I observed the subject at the slider glass doors. I observed him attempting to look at the officers on the ground level while still holding a rifle. Around this point, I heard Officer Freeman fire once. As I was moving inside the apartment, I observed the subject stagger to his feet and move off to the north of the structure.

The subject started shooting his rifle out at police from both sides and he was met with appropriate response of officers firing back at him to stop the threat that was presented to them. The subject collapsed near the front door with his leg visual to another SWAT officer.

A plan was put together to evacuate another unit and then move up to the subject's apartment. When the time came, the plan to move up was implemented. The building was searched without incident and the subject was placed into custody and handed over to Mesa Fire Personnel for medical attention. I had no further involvement in this case.
